

Collision Avoidance Report

[\[Learn in Depth\]](#)

[Mastring Embedded Systems Online Course]

Represented By : Mahmoud Karem Zamel

Supervisor : Eng / Keroles Shenouda

>> System Architecting/Design Sequence:

1-Case Study:

About :

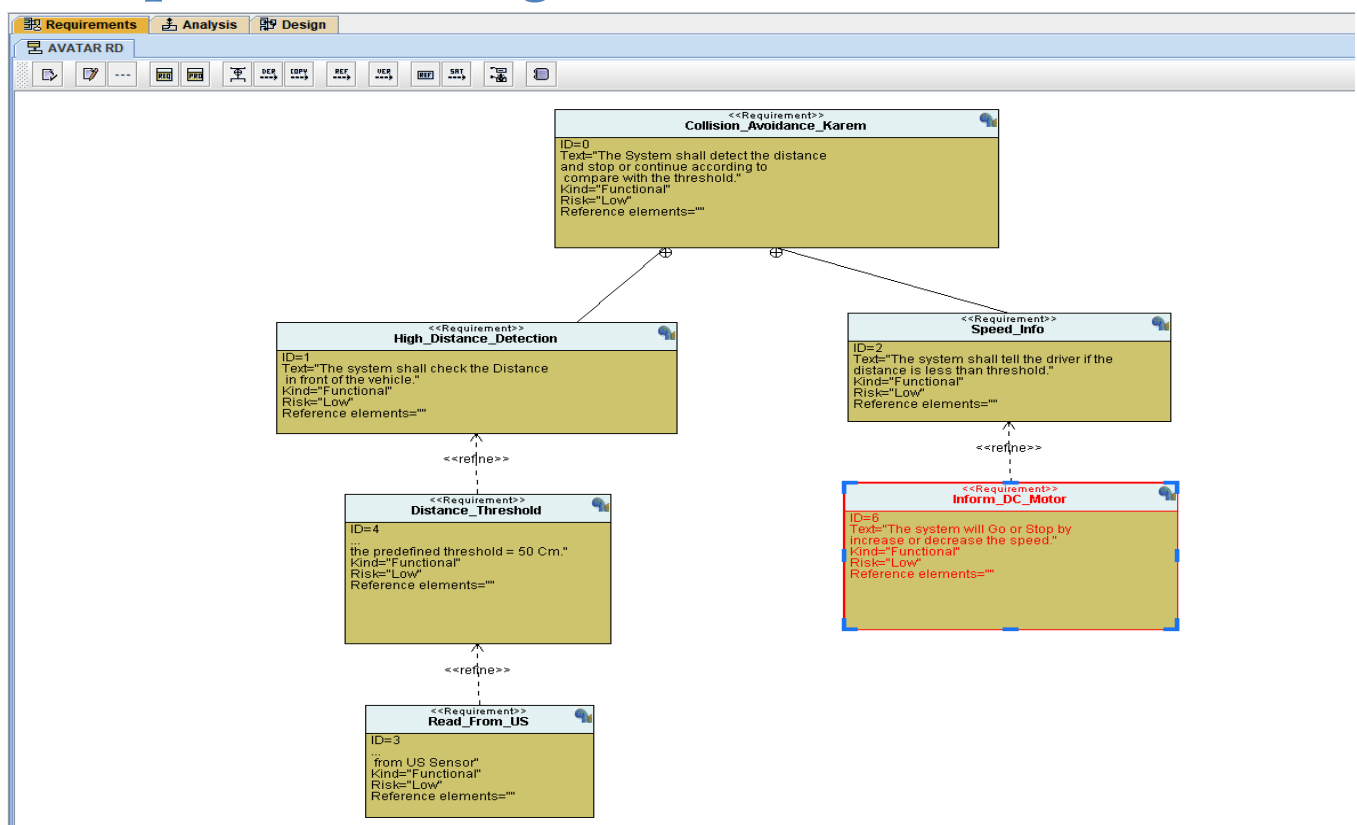

Collision Avoidance System detects the distance between the vehicle and objects in front of it .

Then it decide whether to stop or to continue according to compare with the threshold value .

2-Method

V-Model

3-Requirement Diagram

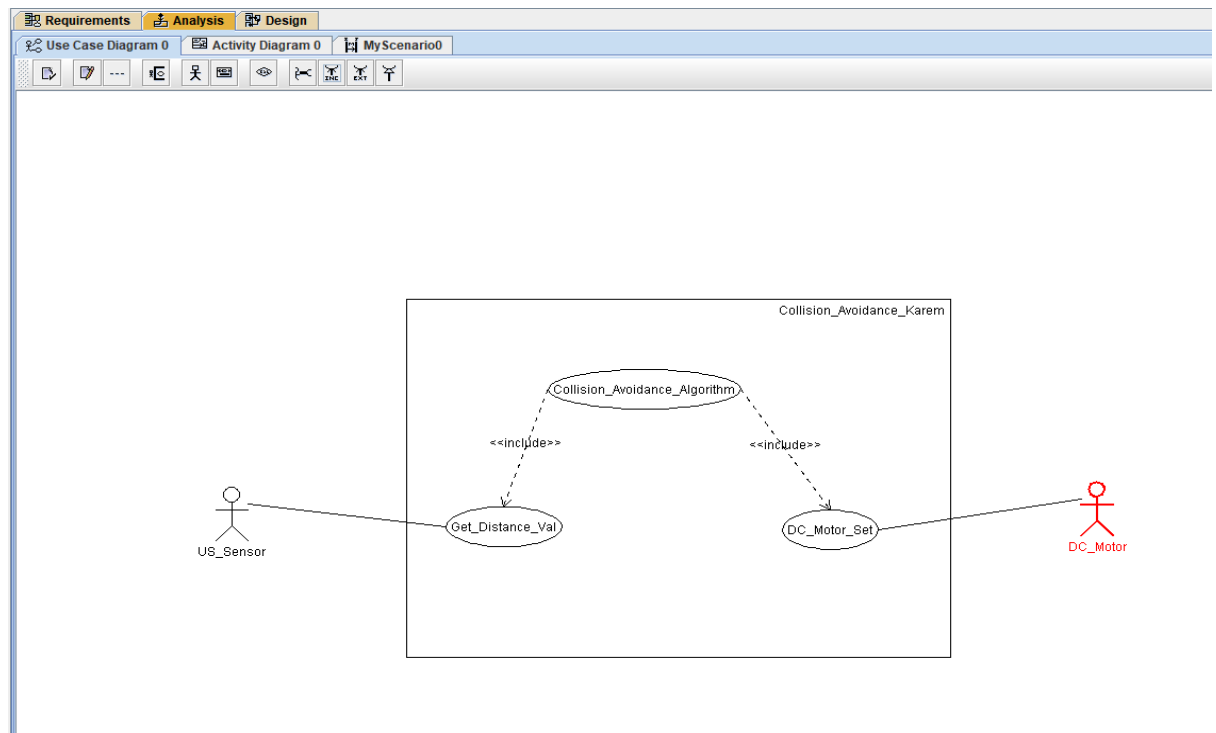

4-Space Exploration/Partitioning

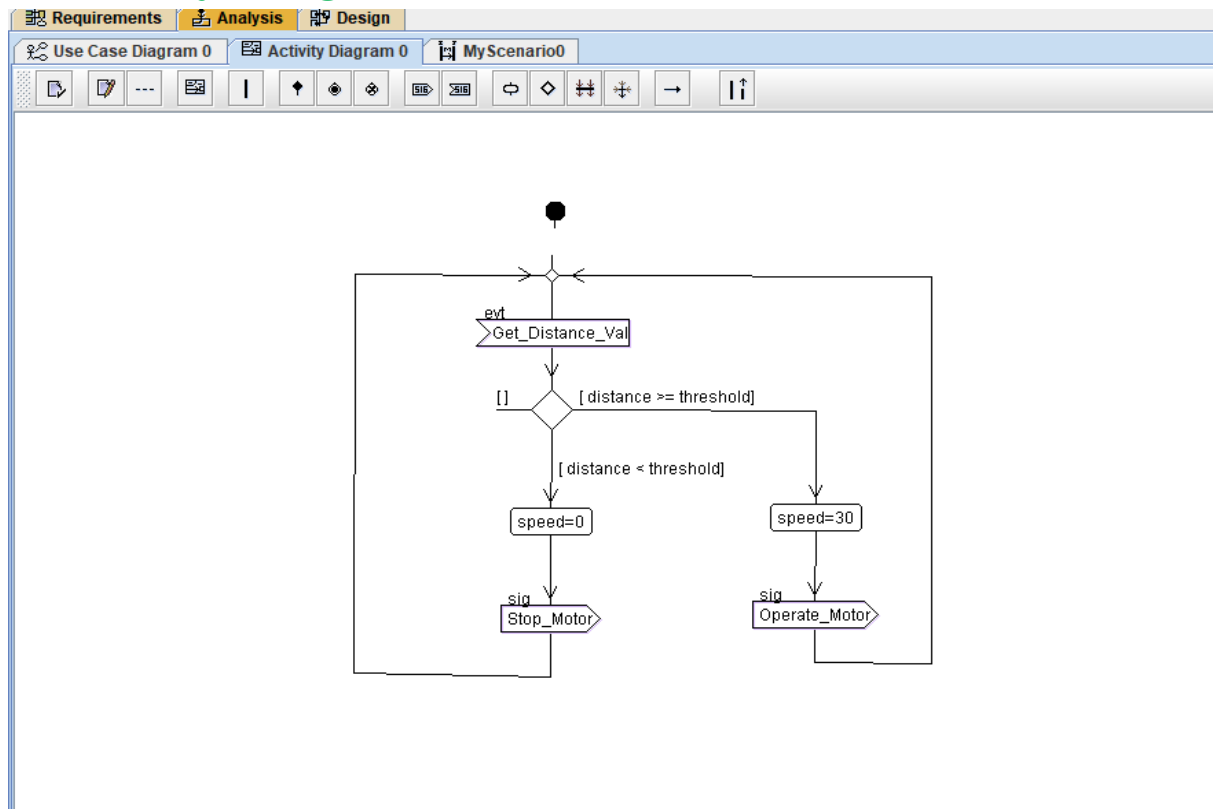

We will use STM32f103c6 for this project

5-System Analysis

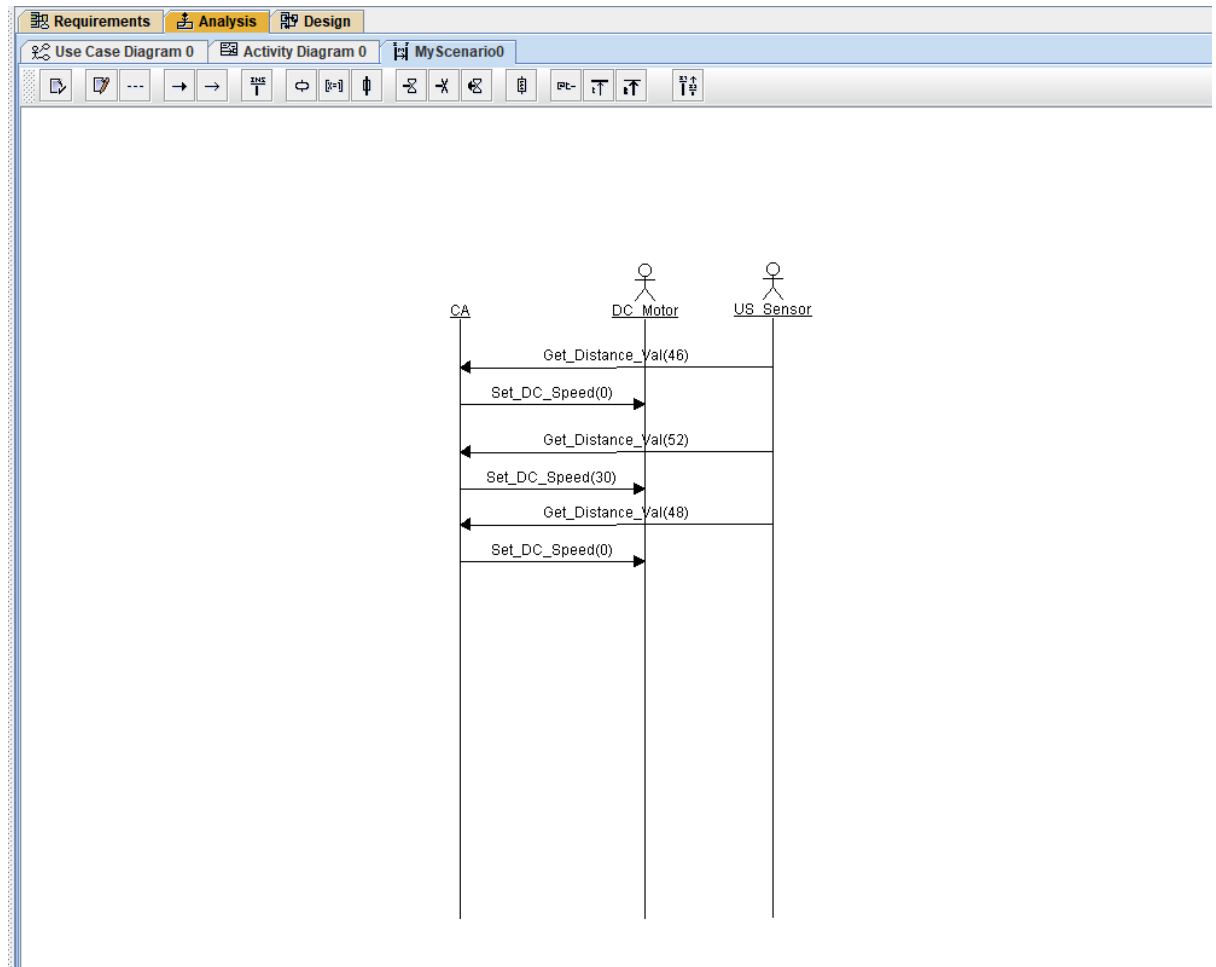

1)Use Case Diagram

2)Activity Diagram

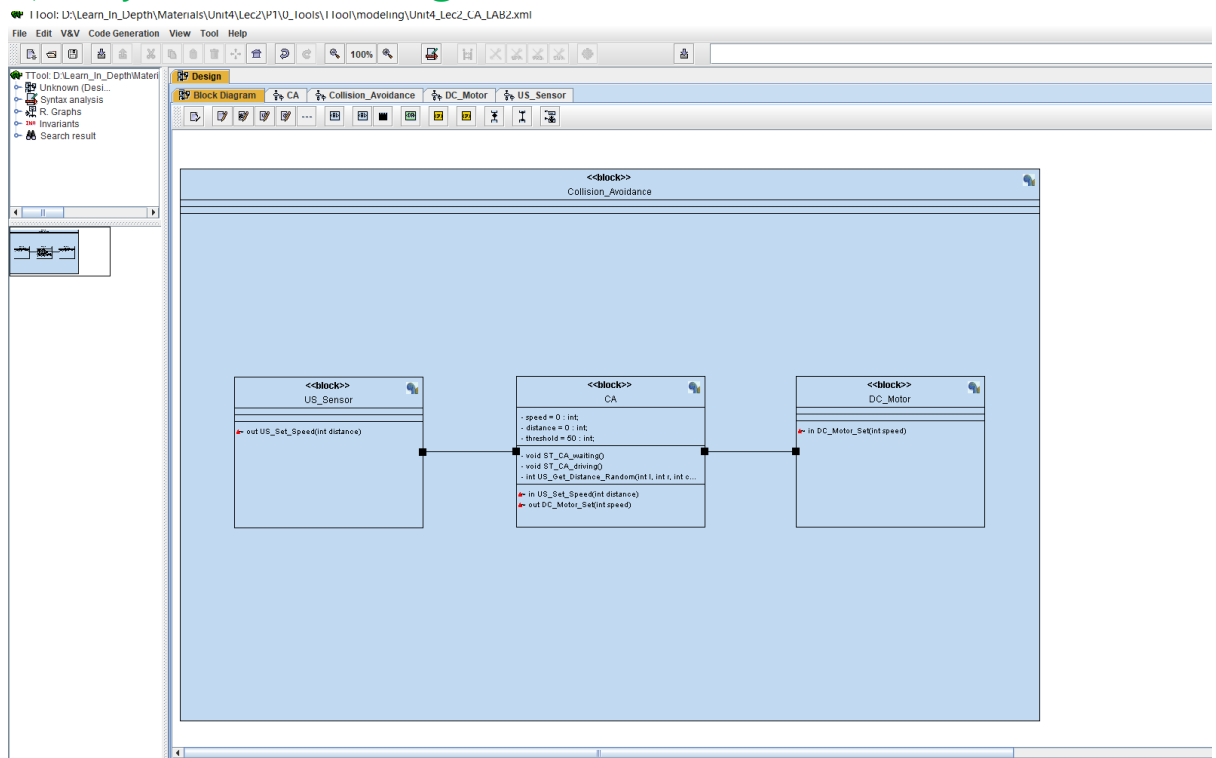

3)Sequence Diagram

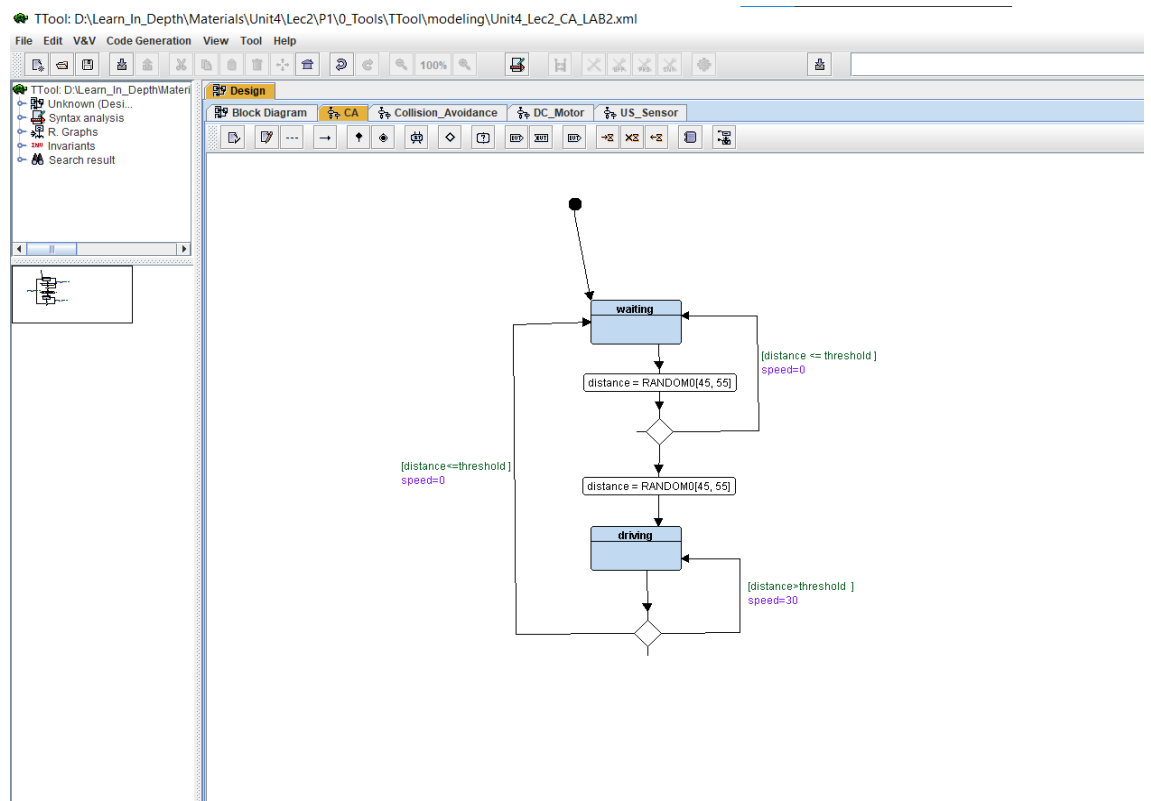

6-System Design

1)Project Block Diagram

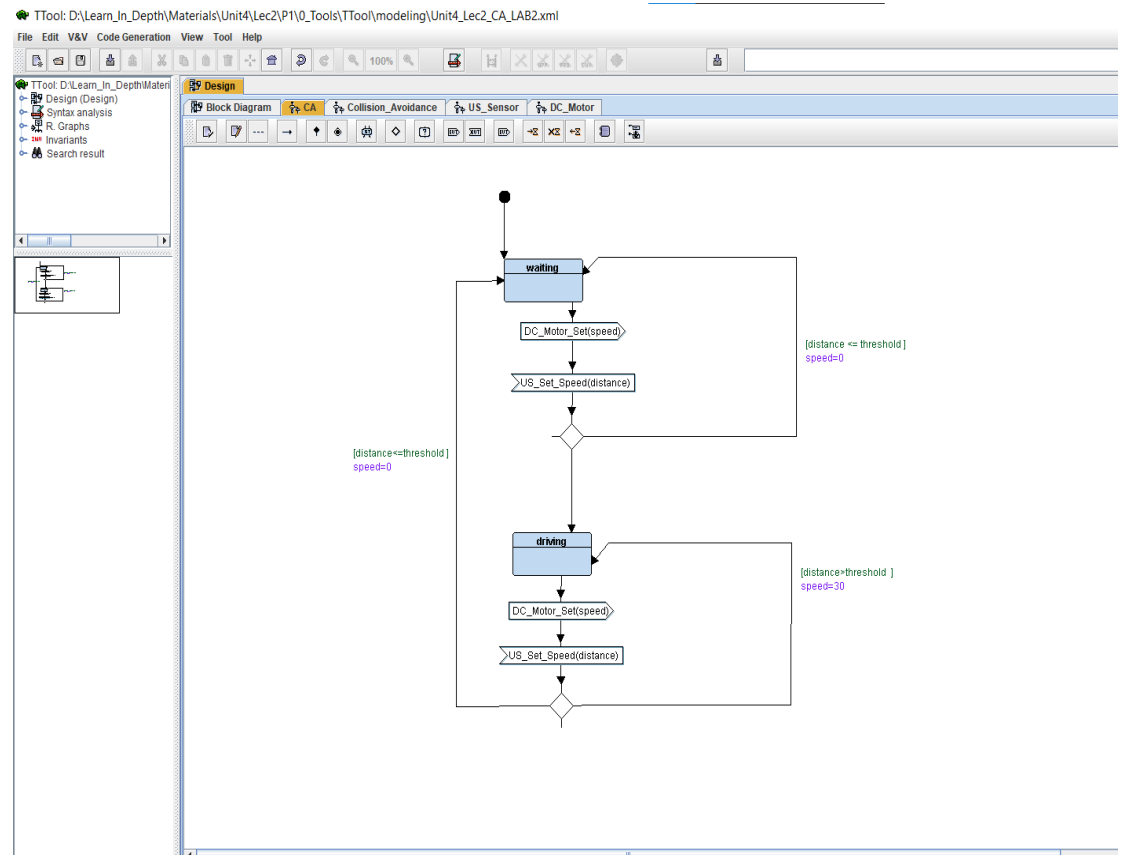

2)State Machine For each Module/Block

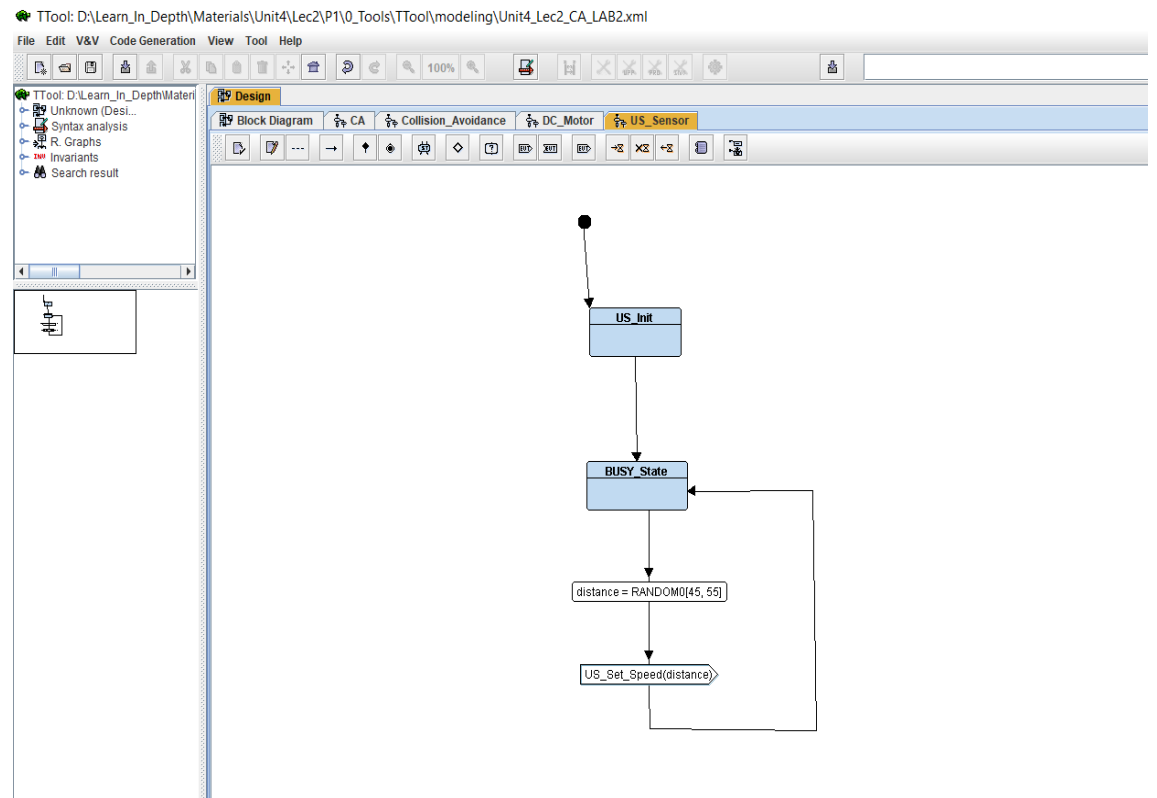

1-Collision Avoidance State Machine

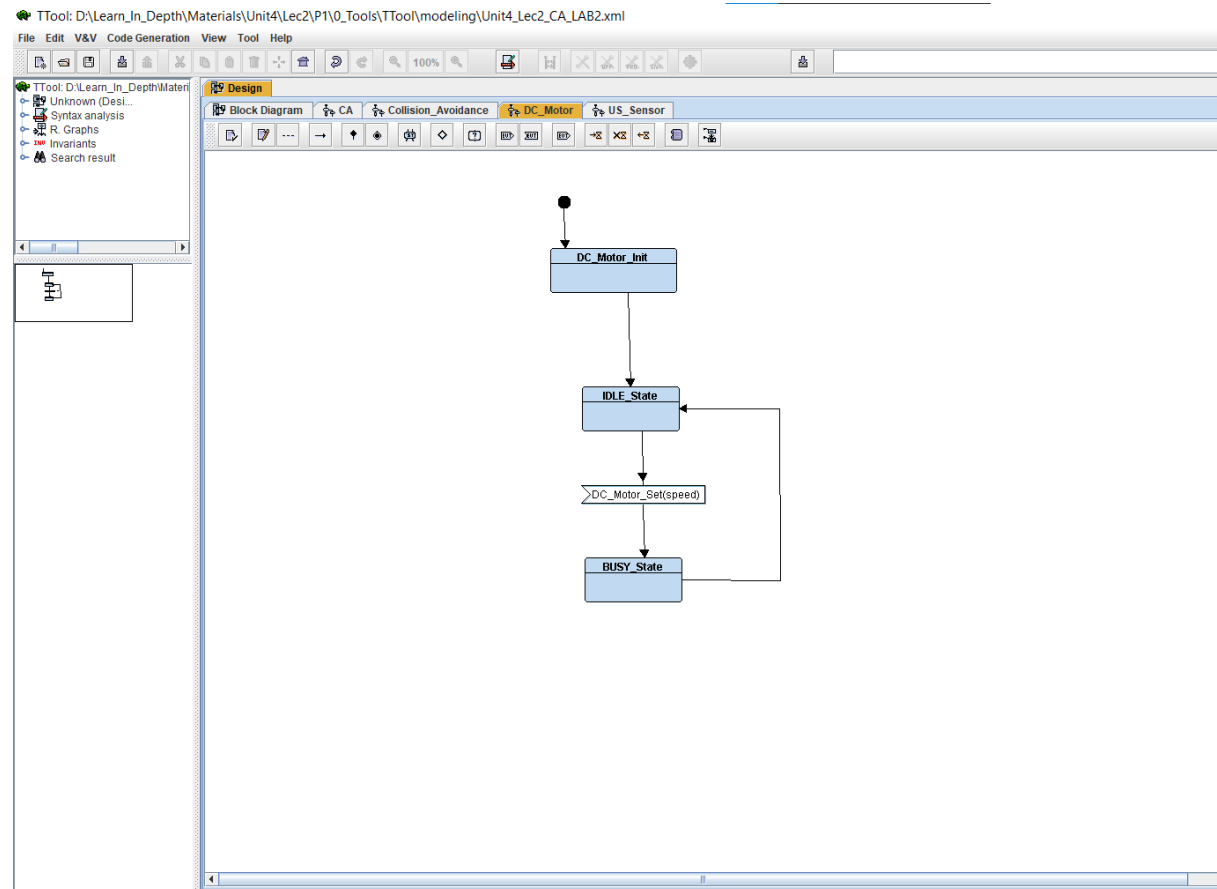

-without Random

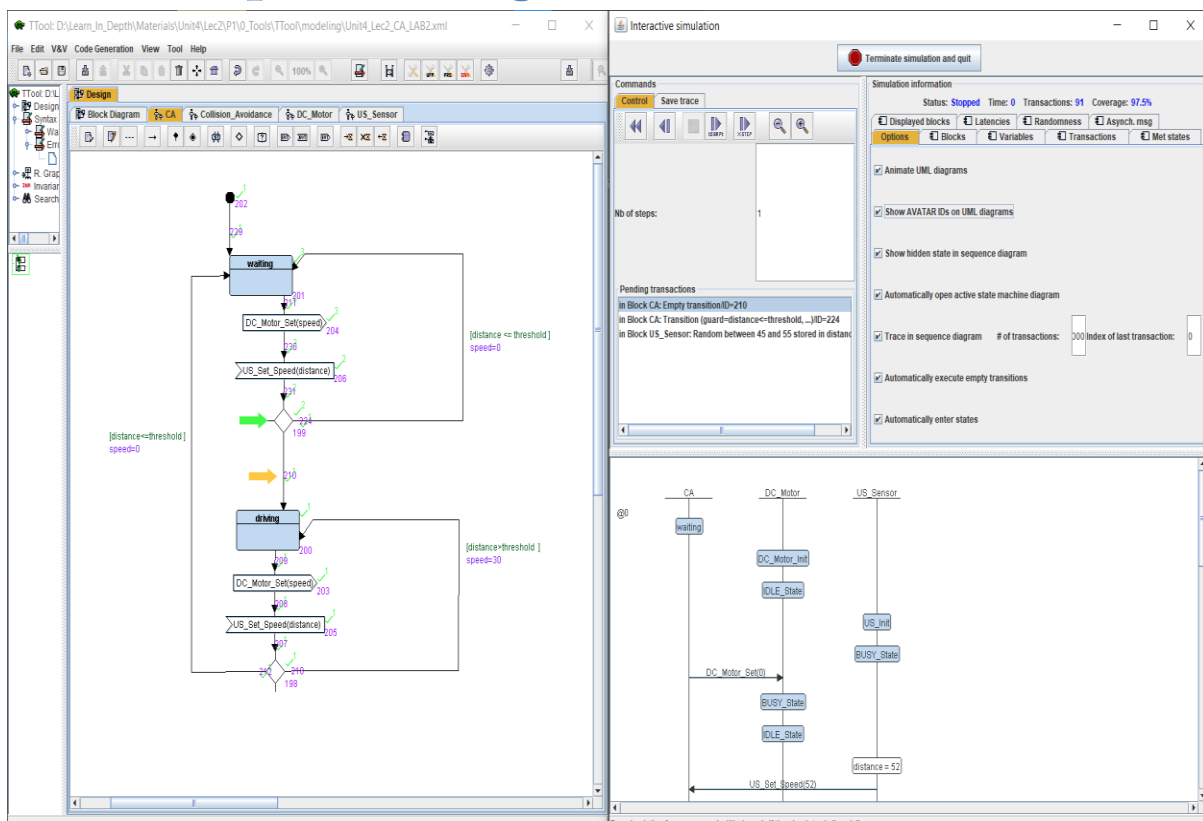

2-Ultrasonic Sensor State Machine

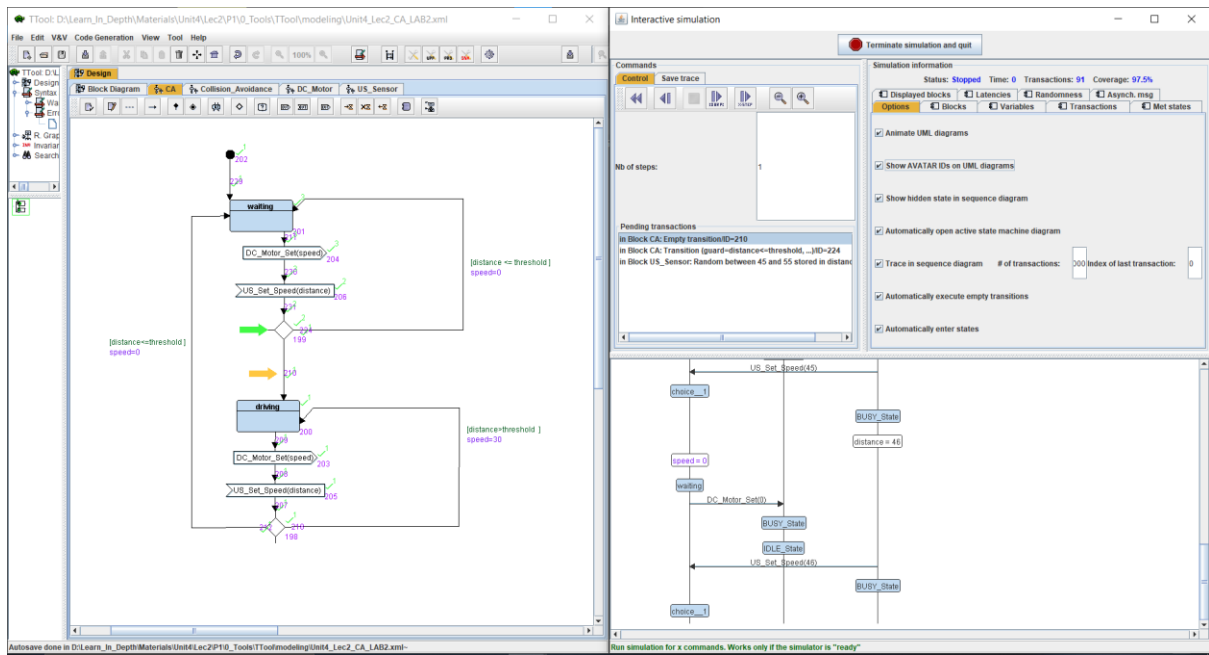

3-DC Motor State Machine

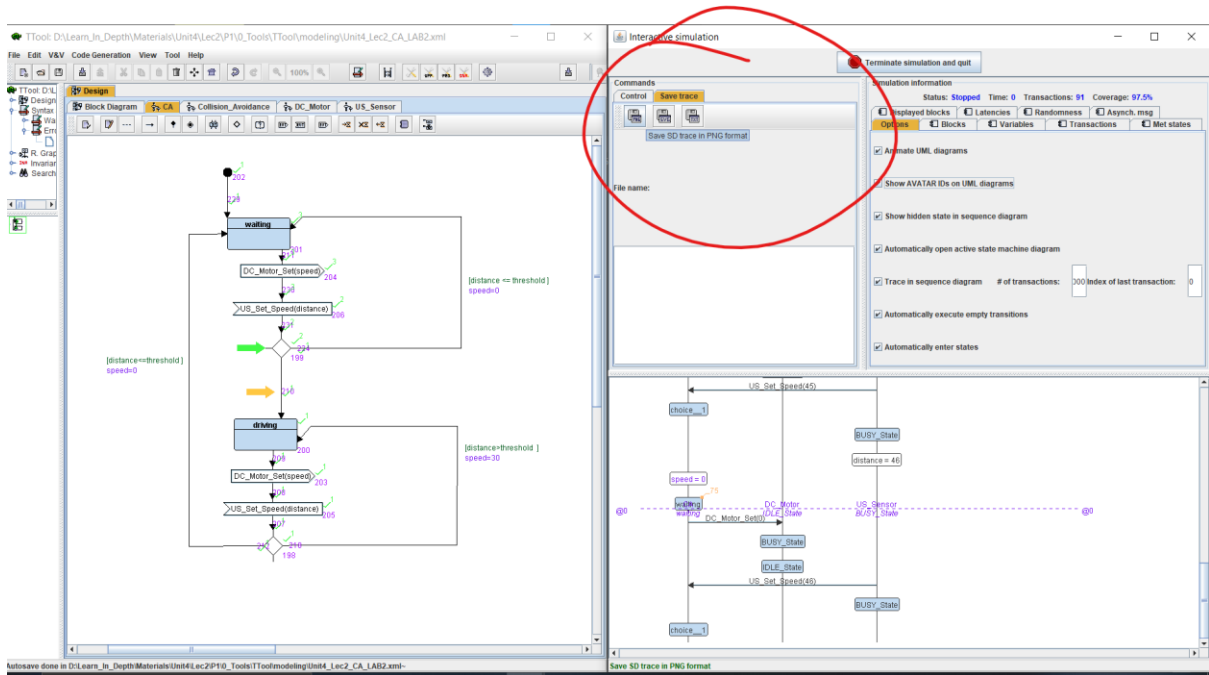

Trace (Sequence Diagram)

RUN The Code:-

The screenshot shows the Eclipse IDE with the following components:

- Project Explorer:** Shows a project named 'CA_LAB2' with sub-projects 'CA_LAB1' and 'CA_LAB2'. The 'CA_LAB2' project contains files like 'Binaries', 'Includes', 'Debug', 'CA.c', 'CA.h', 'DC.c', 'DC.h', 'main.c', 'state.h', 'US.c', and 'US.h'.
- Editor:** Displays the 'main.c' file with the following code:

```
19 CA_init();
20 //Set states pointers for each block (init States for each one)
21 pCA_state = STATE(CA_waiting);
22 pUS_state = STATE(US_busy);
23 pDC_state = STATE(DC_idle);
24
25 }
26
27 void main ()
28 {
29     volatile int Delay ;
30
31     setup();
32     while (1)
33     {
34         //call state for each block
35         pUS_state();
36         pCA_state();
37         pDC_state();
38         for (Delay=0; Delay<=1000; Delay++);
39     }
40 }
41
```
- Console:** Shows the execution output:

```
<terminated> (exit value: -1) CA_LAB2.exe [C/C++ Application] D:\Learn_In_Depth\Work Space\C_Language\CA_LAB2\Debug\CA_LAB2.exe (8/12/22, 1:27 AM)
US_busy state : distance=55
US_busy state : distance=55
US ----- distance=55 -----> CA
CA_Driving state : distance=55 speed=30
CA ----- speed=30 -----> DC
DC_busy state : speed=30
US_busy state : distance=46
US ----- distance=46 -----> CA
CA_Waiting state : distance=46 speed=30
CA ----- speed=0 -----> DC
DC_busy state : speed=0
US_busy state : distance=52
US ----- distance=52 -----> CA
